2016 China-US Climate Roundtable, Nov.14-18, 2016, Washington DC

# World per capita CO<sub>2</sub> Emissions

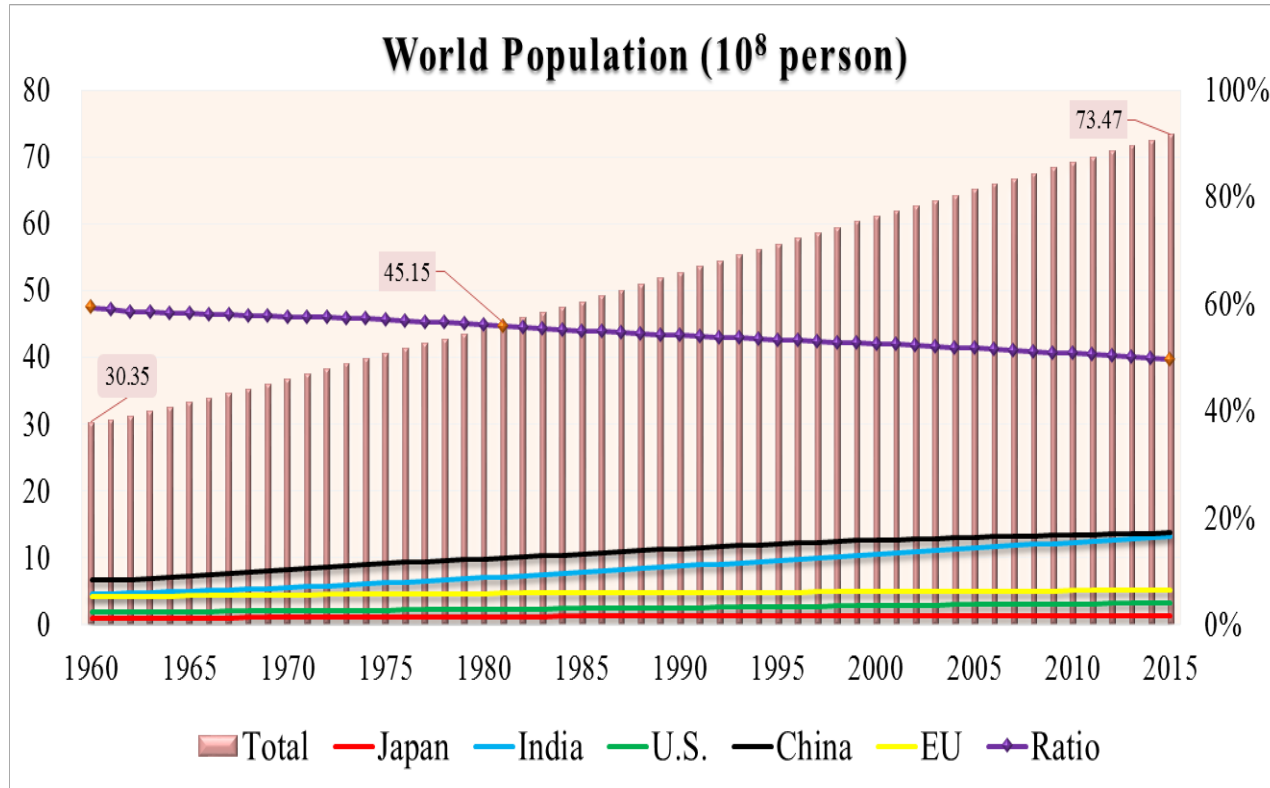

**World's per capita CO<sub>2</sub> emissions** raised from 3.09 to 5.00 metric tones per capita from 1960 to 2015, which increased 0.62 times, with an annual growth rate of 0.93%.

**China's total CO<sub>2</sub> emissions** raised from 1.17 to 7.55 metric tones per capita from 1960 to 2015, which increased 1.05 times, with an annual growth rate of 4.02%.

2007, China's per capita CO<sub>2</sub> emissions surpassed the World's, which was also much less than U.S.'s.

# World Population

**World's population** raised from  $30.35 \times 10^8$  person to  $73.47 \times 10^8$  person from 1960 to 2015, which increased 1.42 times, with an annual growth rate of 1.62%.

Order of the total population: Japan < U.S. < EU < India < China

**China's population** raised from  $6.67 \times 10^8$  person to  $13.71 \times 10^8$  person from 1960 to 2015, which increased 1.05 times, with an annual growth rate of 1.32%.

# GDP per capita
